***International Statistical Review* (ISR)** is the flagship journal of the International Statistical Institute (ISI) and its seven Associations. It publishes papers of wide interest in statistics and probability including reviews/surveys of significant developments in theory, methodology, statistical computing, statistical education and papers on history of statistics. The journal incorporates *Short Book Reviews* which provides a rapid book review service covering books on statistics and related subjects published throughout the world. ISR is issued three times per year.

Stat – the ISI's journal for the rapid dissemination of statistics research is an online only, rapid communication research journal publishing short articles of the highest quality from all areas of statistics and interdisciplinary areas. Stat provides a means of rapid sharing of important new theoretical, methodological and applied research for the international community of statisticians, and for researchers and practitioners in other disciplines where statistics plays an important role.

Bernoulli is a journal of the Bernoulli Society for Mathematical Statistics and Probability and is disseminated by the Institute of Mathematical Statistics on behalf of the Bernoulli Society. The journal provides a comprehensive account of important developments in the fields of statistics and probability, offering an international forum for both theoretical and applied work.
*Bernoulli* is issued four times per year.

***Stochastic Processes and their Applications* (SPA)** is a journal of the Bernoulli Society for Mathematical Statistics and Probability. It publishes papers on the theory and applications of stochastic processes. It is concerned with concepts and techniques and is oriented towards a broad spectrum of mathematical, scientific and engineering interests. Characterization, structural properties, inference and control of stochastic processes are covered. The journal is exacting and scholarly in its standards. It is issued twelve times per year.

***Statistical Journal of the International Association for Official Statistics* (SJIAOS)** publishes papers of wide interest to both users and producers of official statistics with a focus on the basic principles of official statistics. The areas covered are, among others, the importance of applying the best scientific methods, the need for statistical independence, the balance between the needs of users and the burden on respondents, and the continuing challenges around confidentiality. The journal is issued four times a year.

***Computational Statistics and Data Analysis* (CSDA)** is the official journal of the International Association for Statistical Computing (IASC). It is dedicated to the dissemination of methodological research and applications in the areas of computational statistics and data analysis. The topics covered are the impact of computers on statistical methodology, the development, evaluation and validation of statistical software, data analysis strategies and comparison of statistical methodologies. The journal is issued twelve times per year.

***Applied Stochastic Models in Business and Industry* (ASMBI)** is a journal of the International Society for Business and Industrial Statistics (ISBIS). It publishes contributions in the interface between stochastic modelling, data analysis and their applications in business, finance, insurance, management and production. The main focus is on papers presenting new results which solve real-life problems or have great potential in doing so, as well as papers presenting new methods for solving such problems, i.e. optimization, data base management, knowledge acquisition, expert systems, computer-aided decision supports and neural computing. The journal is issued six times per year.

Environmetrics is the official journal of The International Environmetrics Society (TIES). It is devoted to the dissemination of high-quality quantitative research in the environmental sciences, broadly construed. The journal focuses on areas of applied mathematics, engineering and signal processing, statistics, risk analysis, and other quantitative disciplines. It is meant for professional statisticians and researchers concerned with environmental, ecological and biological sciences. *Environmetrics* is issued eight times per year.

***Statistical Theory and Method Abstracts* (STMA)** is available as a combination of the entries of *Zentralblatt MATH (ZMATH)* in the field of statistics and probability with an extension by references in statistics which are not considered as mathematical statistics. The new name of the service is **STMA-Z**. *ZMATH* is the most complete and longest running abstracting and reviewing services in mathematics and its applications, containing almost 3 million entries drawn from more than 2,300 serials and journals, covering the period from 1868 to the present. *STMA-Z* will provide subscribers with specific access to statistical references and related fields.

Open access co-sponsored electronic publications

Electronic Communications in Probability
- publishes short notes, review papers and research announcements in probability theory.

Electronic Journal of Probability
- publishes full-size research articles in probability theory.

Electronic Journal of Statistics
- publishes research articles and short notes on theoretical, computational and applied statistics.

Probability Surveys
- publishes survey articles in theoretical and applied probability.

Statistics Surveys
- publishes survey articles in theoretical, computational, and applied statistics.

Statistics Education Research Journal
- focuses on research that can help to improve the teaching, learning, and understanding of statistics or probability at all educational levels and in both formal (classroom-based) and informal (out-of-classroom) contexts.
